

Don't Let Your
Chance Slip By

Have You Joined Yet?

The women of this community are quick to recognize the extraordinary value of the "Scientific Sterling" Range and the advantage of the Sterling Club and the Sterling Club is growing fast. You must not put the matter off another day if you want to get the benefit of Sterling Club membership.

Pay for Your Range While Using It

You join the Sterling Club by paying the membership fee of \$5 and this puts the "Scientific Sterling" in your kitchen at once. \$2 weekly dues pay the balance before you are aware of it. You could not get this remarkable range for a cent less if you paid spot cash for it on the first day.

How to Save \$10 to \$15

Every woman who joins the Sterling Club will get these BIG advantages free. We will put your range in your kitchen all connected up for water and gas without a cent of expense to you, saving you even the bother of looking up a plumber.

We will buy back your old range and allow you every cent of value there is in it. This makes it easy to have the new Sterling. After you have tried the range for 30 days, if you find it will not do what we claim for it in our advertisements we will take it back and refund your money. Moreover, should you become totally and permanently disabled, by sickness or accident after joining the Sterling Club, we will pay all your future payments and the range is yours.

When did you ever hear of an offer like this before? But that isn't all! Come in and learn what else we do for Club Members.

The Range With the Small Outside and the Big Inside.

Do you think all kitchen ranges are alike? You know how everything else in the world has advanced and progressed and yet you think the kitchen range is today is about what it was 10 or 15 years ago. The "Scientific Sterling" has improved and advanced so much that it is just as much of an advance in range building over the ranges of 10 years ago as the automobile of 1916 is an improvement over that of 1905.

But You Must SEE the "Scientific Sterling"

No picture or description can give you a true idea of its great convenience. The Sterling "Scientific" range, the Sterling "Scientific" burner, all these features have been designed with two great aims in view: First, to make your work easy; second, to save coal and gas. The "Scientific Sterling" is a beautiful range as well.

But until you can see these things for yourself you cannot appreciate why the "Scientific Sterling" is such a great advance in kitchen ranges.

Come in and see for yourself.

Miss Mathilde Vossler left Wednesday evening on a leave of absence until February 1st to rest and recuperate. All regular activities will be suspended until her return except basket ball practice for older girls on Friday evenings beginning next week and informal dancing on Saturday evening for members of the dancing classes beginning this week.

Attractive little safes, made of the finest steel, finished in oxidized copper and fitted with a device to prevent money from being improperly extracted. This bank will encourage thrift. Although the regular price of these safes has been \$1.99, yet Drysdale proposes to sell them at 25c each, because the banks can be opened only at the Drysdale store. They keep the key. You pay Drysdale 25 cents, take one of the banks home and begin to save money. When you desire the bank opened take it to the Drysdale store. They will open it, hand you the money, and you do what you like with your saving. That is your affair. Incidentally the object of the Drysdale store is to get advertising out of the useful device, and induce you to visit their establishment.

How Soldiers Keep Strong

Preparedness against sickness is the big, important thing to fighting soldiers. A sick soldier cannot work with vigor any more than you can work with energy when you are weak, tired, almost sick.

One efficient warring government is giving each soldier a vial of cod liver oil every day because far-reaching experiments show how wonderfully it increases the calories of human energy and gives them strength to prevent winter sickness. Is this not convincing proof that you need it at this season to enliven your blood to prevent sickness?

Cod liver oil is scarce and high-priced this season and many inferior grades may be offered. But remember that

SCOTT'S is the one EMULSION

which guarantees pure cod liver oil—free from alcohol and drugs.

If you are subject to colds, throat or lung troubles; if you are easily tired, run-down or have thin blood, you should take Scott's Emulsion at once. If your children are backward in growth, frail or anemic, nothing will do them so much good as Scott's Emulsion, and for girls and women in home or business it is nature's great strength-builder.

Scott's is not a "secret" medicine. It is a rich blood-food and a pure tonic; it contains nothing harmful and is pleasant to take. It is prescribed by physicians and liberally used in hospitals and private schools.

One bottle may prevent a sickness. At any drug store—Start it to-day.

Imitations are sometimes offered but this Trade-Mark has stood for supreme quality for the past forty years.

ALWAYS INSIST ON SCOTT'S.

Scott & Bowne, Bloomfield, N. J.

SCOTT'S EMULSION IS MADE IN SUNLIT LABORATORIES.

One Lesson Learned.
"In this practice to become a soldier your first lesson must be of prompt and unquestioning obedience to your superior officer."
"That's all right, captain; I'm married. What's the next lesson?"—Baltimore American.

The Old Family Tree.
"What a lot of men get jobs on the strength of their ancestry!"
"Yes. A good family tree has produced many a plum!"—New York Telegram.

Good Reason.
At Christmas the children of a certain English school tried to collect money by singing carols and snatches of hymns. Many complaints had reached the rector's ears of bands of youngsters scurrying through the first verse of "White Shepherds Watched" and then violently ringing the doorbell. So he instituted inquiries on the next occasion he visited the school. "Why is it," he asked, "that instead of singing the hymn in a reverent way you scamp through one verse and then ring the bell?" Silence reigned for a short time. "Then a shrill voice from a small boy at the back of the room was heard in explanation. "Please, sir, it's 'cause they always lets the dog loose at the second verse."

TUBERCULOSIS DANGER SIGNS

Paper by Dr. H. S. Goodall Read to Rutland County Physicians.

An interesting as well as very instructive paper on "The Early Discovery of Tuberculosis" was read before the regular meeting of the Rutland County Medical and Surgical Reporting club at the Rutland hospital Tuesday morning by Dr. Henry S. Goodall, a well known authority on this disease and its treatment. Dr. Goodall for 10 years was medical director of Stony Wold Sanatorium at Lake Umbagog, 15 miles north of Saranac Lake. This sanatorium accommodates 110 women and girls in the early stages of tuberculosis of the lungs.

Dr. Goodall in his talk said in part: "Only a small per cent of the cases of tuberculosis are recognized during the incipient stage. During this state the patient does not feel or appear sick. He is merely not quite as well

and energetic as usual. About half the failures to discover the disease in its incipient stage are due to the failure of the patient to consult a physician at that time.

"A person who coughs up blood has tuberculosis 99 out of 100 times. A person who coughs up blood in quantity or only in streaks or who has a cough with blood, which lasts from four to six weeks, should have his lungs thoroughly examined. A person who feels tired and listless, who has lost ambition and energy, whose ordinary duties have become a burden, who has lost a few pounds in weight, who is pale, who has persistent indigestion, or persistent hoarseness, a rapid pulse or palpitating heart or a little fever now and then is very often suffering from pulmonary tuberculosis. Every person who has such symptoms that persist without other obvious causes should have their lungs carefully examined.

"The lungs extend from the base of the neck to the sixth rib in front and the 12th rib behind. The rounds that indicate tuberculosis cannot be heard through the clothing, therefore the clothes must be removed to the extent that the examination is to be of use. A light shirt or one may be thrown over the shoulders and held to expose the front, back and sides of the chest in turn. An examination of the lungs made through the clothing is of about as much use as examining

the outside of a house to see what is hanging up in the closets.

"The germs of tuberculosis do not appear in the sputum until the lung begins to break down. The disease is present for some time before this. Therefore the absence of the germs from the sputum in no way indicates the absence of tuberculosis, but the presence of the germs does prove the presence of the disease. The disease can be recognized in a good many cases before the germs appear in the sputum and chance of recovery is much better than later.

"Slight fever is a very important sign of tuberculosis. This fever may be only 99 1/2 and may come at time in the day for only an hour or even less. The investigation of a suspected case of tuberculosis should include a temperature chart so made that it will cover all the working hours on one or more occasions during one week.

"If people would go to their physicians and demand an investigation as to the presence of tuberculosis when such symptoms continue for a month and if the physician would then make a thorough examination of the chest, secure a week's temperature record, covering the even hours one day and the odd hours the next and have the sputum examined, there would be many more cases found while they were incipient and consequently many more would get well."

DANGER TO PUBLIC HEALTH

Special Warning of Vital Importance at This Time—How Lives May Be Saved

Public warning is given to avoid the danger from poisonous drugs and nerve destroying stimulants contained in so many so-called "Cough Cures". Look on the label of these preparations and you will see that they contain morphine, heroin, cocaine, chloroform and other dangerous narcotics which should only be taken under a doctor's orders. You are safe when you take Father John's Medicine because it is pure and whole some, free from dangerous drugs and alcohol and has more than fifty years' success in the treatment of colds and throat and lung troubles.
